

? Questions ?

📖 Instructions 📖

⚠️ Read the questions carefully ⚠️

⚠️ Make sure to discuss all questions ⚠️

1 Create a class component named DisplayCard. This component is designed to accept props including full name, state, country, and district, which will be utilized for display purposes.

2 Create another class component named Display. This component will serve to pass props for full name, state, country, and district of three sets of information, as per your selection.

3 When displaying the components, alternate between using the background colors silver and tomato for each displayed component.

😊 Hint: Define the class name as a prop, and prior to that, establish the corresponding styling within your CSS file."

Full name : abebe tesema

State :CA
