❓ Questions ❓

1️⃣ The deference algorithm and pseudocode

2️⃣ The difference between for loop, while loop, and do while loop

3️⃣ Write a function that takes a single number as an argument and prints the next 5 numbers from both the negative and positive sides.

4️⃣ Write a function that takes an array of numbers as a parameter and logs the sum of all the numbers in the array to the console.

   ▶️ Modify it in a way if a string is passed with a number, it will check and jump the string to add the numbers only.

   ▶️ also modify it in a way that if a stringified number is passed, change the stringified number to a javaScript number and add it along with other numbers.

5️⃣ For the following array:

   let student = ["almaz","abera","teklaye","fulisa","zeleke"]

   ➡️ Remove teklay

   ➡️ Insert "chulu" between fulisa and zeleke

   ➡️ Replace "abera" with "sami"
