❓ **Questions** ❓

1️⃣ Create a component called "Product" after setting up your react application

2️⃣ Within the created component, initiate an API call to retrieve 5 product items from https://fakestoreapi.com

😊 Hint: Visit the provided link and click on the "Read Docs" button. Under the "Products" section, explore various options to select the one that aligns with your requirements.

3️⃣ Upon retrieving the items, display the title, price (with a preceding $ sign), and image of each item within the Product component.

⚠️ Ensure to apply simple styling to enhance the view of the image, title, and price.

⚠️ Utilize optional rendering (using ? operator) before iterating over the items (e.g., Product?.map()).

💻 Happy coding 💻
